

How to care for your Christmas Tree

- Keep your tree fresh by cutting an inch off the base and placing in water (we are very happy to do this for you)
- After purchase, to maintain a fresh tree for Christmas, Leave in water outside for as long as possible
- When you bring your tree inside, place it in water in a stand, keep away from direct heat*
- Water regularly once indoors
- Keep trees away from major sources of heat (fireplaces, heaters, heat vents, direct sunlight). Lowering the room temperature will slow the drying process, resulting in less water consumption each day.
- Check the stand daily to make sure that the level of water does not go below the base of the tree. **With many stands, there can still be water in the stand even though the base of the tree is no longer submerged in water.**
- Avoid trimming the sides of the trunk down to fit a stand. The outer layers of wood are the most efficient in taking up water and ideally, should not be removed.

Wishing you a very Merry Christmas
